LEARNING VALUE REALIZATION FRAMEWORK

A governed proposal establishing the two-axis pack contract for LVRF, the admissibility test a vertical pack must pass, and the selection of the first pack to be built.

SECTION ONE

STATUS AND GROUNDS

Proposed. This instrument is not in force until ratified. It creates no obligation, populates no metric library, and asserts no value. Section Nine states what ratification requires.

1.1 WHY THIS PROPOSAL EXISTS

LVRF cannot be sold or delivered one-size-fits-all. A record is only producible when the institution already reports the metric and someone inside it holds the authority to attest to that number. Both of those vary by industry. Neither varies by anything else.

CVAF resolved the same problem with industry packs, and the instinct was to inherit that solution wholesale. Two things prevent it. First, an LVRF pack is not structurally the same object as a CVAF pack — what varies is different, so the admissibility test must be different. Second, the working assumption behind this proposal was that a canonical industry list could be inherited from the vendor whose motion LVRF is being built to serve.

That list does not exist. A direct survey of Skillsoft's published surfaces on 2 August 2026 found no industry taxonomy in the go-to-market, no vertical segmentation in the most recent annual filing, and no industry cut on the one solution page where verticalization would be most expected. What exists instead is four fragments, one of them retired.

This is not an obstacle. It is the finding. It changes what LVRF has to supply, and it changes what LVRF is worth.

1.2 WHAT THIS PROPOSAL DOES NOT DO

- It does not populate any metric library with numbers.
- It does not assert Skillsoft revenue concentration by industry. That was not obtainable from admissible sources and is recorded as an open gap.
- It does not build the second pack, or authorise one.
- It does not replace `db/schema.ts`. The schema delta in Section Eight is additive and must be reconciled against the repository before it is applied.

SECTION TWO

Every finding in this proposal traces to a row below. Where a claim is asserted rather than sourced, it is marked as asserted and carries a confidence penalty.

SECTION TWO

EVIDENCE REGISTER

All rows retrieved 2 August 2026 unless otherwise noted. *Basis* distinguishes what was directly observed from what was inferred or taken from a secondary index.

REF	SOURCE	WHAT IT ESTABLISHES	BASIS	CONF.
E-01	skillsoft.com global navigation	Solutions are organised as Leadership & Business Skills, Compliance & Ethics, Technology Skills, and Support & Services. No Industries menu is present anywhere in the primary navigation.	Observed	HIGH
E-02	skillsoft.com footer	`/federal-government` is the only industry-specific destination carried in site navigation.	Observed	HIGH
E-03	skillsoft.com/for-business (retired)	Case studies were previously grouped under four industries: U.S. Federal Government, Financial Services, Healthcare, Manufacturing. The URL now redirects to the homepage; the grouping was dropped at the February 2026 rebrand.	Index snapshot (Jan 2026)	MED
E-04	skillsoft.com/customer-stories	A live Industries filter facet exists — the only first-party industry taxonomy still operating. Observed tag values: Consulting; Biotech / Pharmaceutical; Food and Beverage. The full facet list is client-rendered and was **not** enumerated.	Partially observed	MED
E-05	skillsoft.com/customer-stories	Named reference accounts span airlines, public health, medical devices, IT services, municipal government, insurance services, and print manufacturing: Delta Air Lines, Denver Health, Philips Healthcare, NTT DATA, City & County of Denver, Asurion, Lexmark. Also CGI and Apexon.	Observed	HIGH
E-06	skillsoft.com/compliance-leaders	The Compliance solution — the one place verticalization would be most expected — is cut by *risk theme* instead: GenAI ethics, workplace safety, CSR/ESG, cyber defence. Sensata Technologies and Scotts Miracle-Gro appear as named proof.	Observed	HIGH
E-07	Skillsoft FY2026 Form 10-K filed 7 April 2026	The business is described by segment (Talent Development Solutions, Global Knowledge) and by subject area — leadership and business, technology, compliance. No vertical taxonomy appears. Industries are referenced only in the context of partner-led coverage, and are not enumerated.	Observed	HIGH
E-08	Percipio course catalogue	Industry-context content exists at course level — e.g. a Financial Services industry overview course. This is content-level, not go-to-market-level, and a single instance is not evidence of a taxonomy.	Observed, single instance	LOW

REF	SOURCE	WHAT IT ESTABLISHES	BASIS	CONF.
E-09	Third-party technographic aggregators	Several vendors publish Skillsoft install-base counts segmented by industry. **Ruled inadmissible.** Methodology is undisclosed, the figures conflict across vendors, and none is verifiable. Recorded here so the decision to exclude is on the record.	Excluded	**N/A**

CONVERGENCE

E-01, E-06 and E-07 are three independent surfaces — marketing navigation, solution positioning, and a regulated financial filing. All three organise the business by capability domain and none by industry. Agreement across three surfaces of different provenance is what lifts the central finding to high confidence.

SECTION THREE

Three findings follow from the evidence. The first is a gift. The second is the work. The third is uncomfortable and should not be softened.

SECTION THREE

FINDINGS

3.1 FINDING I — THE HORIZONTAL AXIS IS ALREADY GIVEN

Skillsoft's three published solution areas — Leadership & Business, Compliance & Ethics, Technology — are, functionally, a horizontal segmentation of workforce capability. They are stable, they appear identically in the marketing navigation and in the annual filing (E-01, E-07), and they are the vocabulary the buyer already uses.

LVRF's horizontal pack axis should bind to those three at the top level. Role families sit beneath them. This is alignment obtained at zero cost, and it removes an argument that does not need to be had in a first conversation.

3.2 FINDING II — THE VERTICAL AXIS IS ABSENT, AND IS THEREFORE THE CONTRIBUTION

There is no industry taxonomy to inherit. The four fragments that exist are: one true vertical page (Federal), one retired four-industry grouping, one partially-enumerable customer-story facet, and one course-level content tag (E-02, E-03, E-04, E-08).

This matters more than it first appears. A marketing segmentation is built to route a buyer to a page. It is not built to answer the only question LVRF actually needs answered:

> THE QUESTION A VERTICAL PACK EXISTS TO ANSWER
>
> **Can this institution produce the number, and is there someone inside it with the standing to attest to it?**
>
> No published Skillsoft surface answers this, because no published Skillsoft surface was built to. The vertical axis is not a data-entry exercise. It is the contribution.

3.3 FINDING III — THE PROOF/REVENUE ASYMMETRY

Applying the test in Section Four to the named accounts in E-05 produces an uncomfortable result. Technology and IT services, and professional services and consulting, are heavily represented among Skillsoft's published reference accounts — and they are precisely the two segments where LVRF cannot produce a verified record, because those institutions do not measure workforce consequence in any form a CFO would accept.

Conversely, the segments where the metric already exists and the attestation authority is named and known — utilities, life sciences, banking, healthcare delivery — exist because a regulator compels them to. The number is free. It is already audited. It cannot be disputed by the customer or fabricated by the vendor.

STATED PLAINLY

The accounts that are easiest to sell are the hardest to prove. The accounts that are hardest to sell are where proof is free.

This is a strategic finding, not a defect in LVRF. It says where a value-engineering function should be pointed first, and it is the kind of thing a revenue leader should want to be told before it is discovered at a renewal.

Confidence note. The *direction* of this asymmetry is well supported by E-05 and E-06. The *magnitude* — what share of revenue sits in the unprovable segments — is not evidenced, because the admissible sources do not disclose it and the inadmissible ones (E-09) were excluded. Magnitude is a discovery question, not a research question.

SECTION FOUR

THE PACK TEST

CVAF's sub-industry rule is: a sub-industry earns its own pack when its stage contract and value model differ materially. That rule is correct for CVAF and wrong for LVRF, because in LVRF the stage contract does not vary. The value spine is the value spine.

4.1 THE FOUR THINGS THAT DO VARY

DIMENSION	WHY IT DETERMINES WHETHER A RECORD CAN BE PRODUCED AT ALL
Metric library	The business metrics the institution *already reports*. Not levers on a shared model — different measurements entirely. A utility reports recordable incidents; a bank reports audit findings; a hospital reports credentialing lapses. This is the foundation of every record.
Attestation authority	Who inside the institution can attest to that number. Safety Director, Chief Credit Officer, Head of Quality Assurance. This determines whether `commit` and `verify` can complete, and it is the single thing that lifts a record above its unverified confidence ceiling.
Baseline availability	Whether the institution can produce the number at all. Regulated industries measure workforce consequence well because they must. Professional services barely measure it. Encoding this lets an engagement be judged infeasible *before* it is sold.
Regulatory overlay	Unique to LVRF, with no CVAF analogue. In regulated industries learning carries compliance value with hard-dollar consequence — citations, consent decrees, licence lapses. This is the strongest value case LVRF can make anywhere.

4.2 THE RULE

> LVRF SUB-INDUSTRY RULE
>
> **A vertical earns its own pack when its metric library or its attestation authority differs materially from an existing pack.** Differences in buyer language, deal size, content mix, or sales territory do not qualify.

Applied concretely:

- **Biotech and Pharma → one pack.** Same GxP regime, same 483 exposure, same Quality Assurance attestation. Note this diverges from the CVAF treatment, where the two cleared the bar as separate packs. Different test, different answer — correctly.
- **Regulated utilities and midstream oil & gas → two packs.** Different regulator, different mandated metric, different attesting officer.
- **Retail banking and commercial banking → one pack.** Same examination regime, same Chief Compliance Officer standing.

SECTION FIVE

Ten candidate verticals, each run against the four dimensions. Metric libraries and attestation titles below are asserted from domain knowledge, not sourced from Skillsoft. They are discovery inputs, not findings.

SECTION FIVE

CANDIDATE ROSTER

VERTICAL	METRIC ALREADY REPORTED	ATTESTATION AUTHORITY	BASELINE	OVERLAY	VERDICT
Regulated Utilities & Energy	TRIR, DART, OSHA recordables, NERC findings	VP HSE / Director of Safety	Mandated	Heavy	PACK — FIRST
Life Sciences Pharma, biotech, device	GxP deviations, FDA 483 observations, CAPA cycle time, training-record audit failures	Head of Quality Assurance	Mandated	Heavy	ELIGIBLE
Banking & Financial Services	Audit findings, remediation cycle time, MRAs, AML alert quality	Chief Compliance Officer / Chief Credit Officer	Mandated	Heavy	ELIGIBLE
Healthcare Delivery	Credentialing lapse rate, accreditation findings, HAI rate, readmission	CNO / Chief Compliance Officer	Mandated	Heavy	ELIGIBLE
U.S. Federal & Public Sector	IG findings, mandated training currency, mission readiness	Agency CHCO	Mandated	Heavy, procurement-shaped	DEFER
Industrial Manufacturing	TRIR, scrap and rework rate, first-pass yield, OEE	Plant Operations / Corporate EHS	Common	Moderate	ELIGIBLE
Aviation, Transport & Logistics	Training currency, safety events, regulator findings	Director of Safety	Mandated	Heavy	DEFER
Retail, Consumer & Food/Beverage	Shrink, turnover, food-safety citations	Operations / Quality Assurance	Mixed	Moderate	DEFER
Technology & IT Services	None reported as workforce consequence	Undetermined	Absent	Negligible	FAILS TEST
Professional Services & Consulting	Utilisation, realisation rate — weak and disputable	Practice leadership — no attestation standing	Weak	Negligible	FAILS TEST

Notes on the deferrals

- **Federal** passes the test cleanly but is deferred because Skillsoft already fields this vertical directly (E-02). A pack adds the least marginal insight where the vendor already has a dedicated motion.
- **Aviation and transport** passes the test but rests on thin install-base evidence — one named account (E-05). Revisit when the install-base gap is closed.
- **Retail and consumer** is mixed: food and beverage carries a real regulatory overlay and appears in the customer-story facet (E-04), while general retail does not. If it is later built, it should be built as food and beverage only.

MARKED AS ASSERTED

Every metric and attestation title in the table above is asserted from domain knowledge. None was sourced from Skillsoft, from a customer, or from a filing. They are the discovery agenda — the questions to confirm with a practitioner — and must not be carried into any customer-facing artefact as though they were established.

SECTION SIX

RESOLUTION

6.1 ONE PACK, NOT SIX

Six packs were approved for CVAF, and that was correct — *after* Fluor and JE Dunn had proven the model. Opening LVRF with a six-pack roster would be the thirteen-volumes error wearing a new costume. This proposal authorises **one**.

6.2 FIRST PACK: REGULATED UTILITIES & ENERGY

Designated `LVRF-PACK-UTIL-001`.

Grounds. The pack is already half-built and, more importantly, already proven. The Northgate Utilities record (Use B) reached 80/100 confidence, verified and customer-shareable, against a metric the regulator compels the institution to report. That is not an assertion about what the pack could do. It is a record that exists.

6.3 THE COUNTER-ARGUMENT, RECORDED

A serious case exists for opening with **Life Sciences** or **Banking** instead. Both clear the test as cleanly as utilities. Both sit closer to the renewal revenue that a value-engineering function would be hired to defend, and both would therefore move a durable-revenue metric faster. Utilities may simply not be big enough in the book to matter.

Why it does not carry. The two options are not symmetric in risk. A second pack built on a proven pattern is cheap. A first pack built on an unproven one is not — and if it fails, the failure is ambiguous between the pack and the mechanism. Utilities first buys a clean attribution. Banking or life sciences second buys the revenue proximity, at a fraction of the cost, once the pattern is known to work.

> TRIGGER FOR THE SECOND PACK
>
> The second pack is not authorised by this instrument. It is authorised when `LVRF-PACK-UTIL-001` has produced **two verified records at two distinct institutions**. Until then, the pattern is a sample of one.

SECTION SEVEN

THE PACK CONTRACT

7.1 TWO AXES

A pack instantiation is the *intersection* of a vertical and a horizontal. Neither is usable alone.

AXIS	SUPPLIES	BINDS TO
Vertical (industry)	Metric library, attestation authority map, baseline availability declaration, regulatory overlay register	Nothing published — supplied by Rule76 (Finding II)
Horizontal (role family)	Capability set	Leadership & Business / Compliance & Ethics / Technology (Finding I)

7.2 WHAT A PACK SUPPLIES

A pack is the Rule76 definition of what each stage of the spine *requires and produces* for that intersection. It is not a set of default numbers. This definition is inherited unchanged from the CVAF pack architecture and is the one part of that architecture that transfers cleanly.

7.3 PROHIBITIONS

A PACK MAY NEVER

- Introduce visual language of any kind — no colour, no typography, no document structure, no gold of its own. A pack populates governed templates. The moment a third pack can style itself, the design system has fragmented.
- Supply a default value, benchmark, or number that has not been sourced and marked.
- Raise the confidence of a record. Only attestation does that.
- Carry both axes. A vertical pack holds no capabilities; a horizontal pack holds no metrics and no attestation roles. This is enforced in the schema, not in prose.

7.4 CONSTITUTIONAL NOTE

Pack is now the second object both Chapels have independently arrived at, after the realization record. Two Chapels inventing the same structure twice is the signal that **Pack is a Cathedral canonical object** — identity, lifecycle, ownership, ratification, versioning and inheritance belong above both Chapels; only content is Chapel-specific.

This proposal does not itself elevate Pack to the Cathedral. It supplies the second implementation that would justify doing so, derived rather than declared. If the deferred amendment on Cathedral canonical objects is taken up, this document is its second data point.

SECTION EIGHT

SCHEMA DELTA — MIGRATION 0004

Additive only. Per Non-negotiable 9, the repository is authoritative for `db/schema.ts`. Identifiers below must be reconciled against the repository before application. Nothing here replaces an existing definition, and no file is to be written wholesale.

Five tables. The two-axis contract and the prohibitions in Section 7.3 are expressed as CHECK constraints rather than as documentation, so that a violation fails at write time.

```sql
-- 0004_packs.sql   (proposed; reconcile identifiers before applying)

CREATE TABLE packs (
  id              uuid PRIMARY KEY DEFAULT gen_random_uuid(),
  tenant_id       uuid NOT NULL REFERENCES tenants(id),
  axis            text NOT NULL CHECK (axis IN ('vertical','horizontal')),
  pack_key        text NOT NULL,
  name            text NOT NULL,
  version         text NOT NULL DEFAULT '0.1.0',
  status          text NOT NULL DEFAULT 'proposed'
                    CHECK (status IN ('proposed','ratified','retired')),
  ratified_at     timestamptz,
  deleted_at      timestamptz,
  created_at      timestamptz NOT NULL DEFAULT now(),
  updated_at      timestamptz NOT NULL DEFAULT now(),
  UNIQUE (tenant_id, pack_key, version),
  -- a pack cannot be ratified without a ratification timestamp
  CHECK (status <> 'ratified' OR ratified_at IS NOT NULL)
);

CREATE TABLE pack_metrics (
  id                      uuid PRIMARY KEY DEFAULT gen_random_uuid(),
  pack_id                 uuid NOT NULL REFERENCES packs(id),
  metric_key              text NOT NULL,
  name                    text NOT NULL,
  unit                    text NOT NULL,
  reporting_basis         text NOT NULL,        -- what compels the institution to report it
  regulatory_source       text,                 -- null = not regulator-compelled
  baseline_availability   text NOT NULL
                            CHECK (baseline_availability IN
                                   ('mandated','common','rare','absent')),
  source_verified         boolean NOT NULL DEFAULT false,
  deleted_at              timestamptz,
  created_at              timestamptz NOT NULL DEFAULT now(),
  updated_at              timestamptz NOT NULL DEFAULT now(),
  UNIQUE (pack_id, metric_key)
);

CREATE TABLE pack_attestation_roles (
  id               uuid PRIMARY KEY DEFAULT gen_random_uuid(),
  pack_id          uuid NOT NULL REFERENCES packs(id),
  role_title       text NOT NULL,
  authority_scope  text NOT NULL,
  can_verify       boolean NOT NULL DEFAULT false,
  deleted_at       timestamptz,
  created_at       timestamptz NOT NULL DEFAULT now(),
  updated_at       timestamptz NOT NULL DEFAULT now(),
  UNIQUE (pack_id, role_title)
);

CREATE TABLE pack_capabilities (
  id              uuid PRIMARY KEY DEFAULT gen_random_uuid(),
  pack_id         uuid NOT NULL REFERENCES packs(id),
  capability_key  text NOT NULL,
  name            text NOT NULL,
  solution_area   text NOT NULL
                    CHECK (solution_area IN
                           ('leadership_business','compliance_ethics','technology')),
  deleted_at      timestamptz,
  created_at      timestamptz NOT NULL DEFAULT now(),
  updated_at      timestamptz NOT NULL DEFAULT now(),
  UNIQUE (pack_id, capability_key)
);
```

```
CREATE TABLE pack_instantiations (
  id                  uuid PRIMARY KEY DEFAULT gen_random_uuid(),
  tenant_id           uuid NOT NULL REFERENCES tenants(id),
  vertical_pack_id    uuid NOT NULL REFERENCES packs(id),
  horizontal_pack_id  uuid NOT NULL REFERENCES packs(id),
  deleted_at          timestamptz,
  created_at          timestamptz NOT NULL DEFAULT now(),
  updated_at          timestamptz NOT NULL DEFAULT now(),
  UNIQUE (tenant_id, vertical_pack_id, horizontal_pack_id)
);
```

Axis enforcement

The prohibition in Section 7.3 — that a vertical pack holds no capabilities and a horizontal pack holds no metrics or attestation roles — cannot be expressed as a table-level CHECK because it spans tables. It is enforced by trigger:

```
CREATE OR REPLACE FUNCTION lvrf_enforce_pack_axis() RETURNS trigger AS $$
DECLARE a text;
BEGIN
  SELECT axis INTO a FROM packs WHERE id = NEW.pack_id;
  IF TG_TABLE_NAME = 'pack_capabilities' AND a <> 'horizontal' THEN
    RAISE EXCEPTION 'LVRF: capabilities may only attach to a horizontal pack';
  END IF;
  IF TG_TABLE_NAME IN ('pack_metrics','pack_attestation_roles') AND a <> 'vertical' THEN
    RAISE EXCEPTION 'LVRF: % may only attach to a vertical pack', TG_TABLE_NAME;
  END IF;
  RETURN NEW;
END;
$$ LANGUAGE plpgsql;

-- and, separately, on pack_instantiations: assert vertical_pack_id.axis = 'vertical'
--                                          and horizontal_pack_id.axis = 'horizontal'
```

> TRIGGER TIMING — CARRIED FORWARD FROM DEFECT-001
>
> All five tables are governed objects. Apply the established pattern: **audit AFTER, touch BEFORE UPDATE**, split. The phantom-row defect came from running both on a BEFORE trigger across an `ON CONFLICT` path; do not reintroduce it here. Hard `DELETE` is prohibited on all five — soft-delete via `deleted_at`, with no UPDATE or DELETE grant to `lvrf_app` on any append-only companion.

Step 0

Before applying: prove the axis trigger rejects a cross-axis insert, on a scratch database, with the exception text observed. The 0003 migration established this discipline and it holds here. Execution reveals what specification cannot.

SECTION NINE

CONFIDENCE LEDGER

CLAIM	BASIS	EVIDENCE	CONFIDENCE
Skillsoft publishes no industry taxonomy in its go-to-market or its annual filing	Sourced — three independent surfaces	E-01, E-06, E-07	95 / 100
Skillsoft's three solution areas are stable and canonical	Sourced	E-01, E-07	90 / 100
A four-industry grouping existed and was retired at the Feb 2026 rebrand	Secondary index; live page redirects	E-03	60 / 100
The customer-story facet is the only live first-party industry taxonomy	Partially observed — 3 of N values	E-04	55 / 100
Metric libraries as stated per vertical	**Asserted** — domain knowledge, not sourced	—	65 / 100
Attestation authority titles as stated per vertical	**Asserted** — titles vary by institution	—	55 / 100
Skillsoft install-base concentration by industry	Inferred from nine named logos; aggregators excluded	E-05, E-09	25 / 100
The proof/revenue asymmetry — direction	Sourced, inferential	E-05, E-06	70 / 100
The proof/revenue asymmetry — magnitude	Not evidenced	—	20 / 100

9.1 WHAT RATIFICATION REQUIRES

1. **Numbering.** This is issued as PROPOSAL-001 rather than an amendment, because the amendment slot reserved for Pack as a Cathedral canonical object was drafted and deferred, and this document should not silently occupy it. Renumber on ratification if that slot is the correct home.
2. **First-pack decision.** Accept Regulated Utilities & Energy, or overturn it in favour of Life Sciences or Banking on the revenue-proximity argument in 6.3.
3. **Schema reconciliation.** Identifiers in Section Eight checked against `db/schema.ts` in the repository. Step 0 executed before migration.
4. **Facet enumeration.** The full customer-stories industry list requires a rendered browser session; it is not obtainable from a static fetch. Until it is enumerated, E-04 stays at 55.
5. **Practitioner confirmation.** The metric library and attestation roles for the first pack confirmed by a person who has held the attesting role — not by a model, and not by this document.

> GOVERNING PRINCIPLE
>
> AI assists the evidence. It never manufactures the value.

9.2 REVISION HISTORY

VERSION	DATE	CHANGE
1.0.0	2 August 2026	Established. Survey of Skillsoft published surfaces recorded as E-01 to E-09. Two-axis contract stated. LVRF sub-industry rule distinguished from the CVAF rule. Ten-vertical roster assessed. Regulated Utilities & Energy proposed as first pack, with the counter-argument recorded. Schema delta drafted as migration 0004, additive.
